

# Aerospace & Composite Machining Solutions

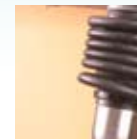

Abrasive **Waterjet** Machines

**High Speed** Drilling & Routing Machines

Composite Machining Centers

**Specialty Composite** Machining Centers

# Superior Solutions for Machining Composites

One system with **combined solutions** for performing all **composite machining** requirements between autoclave and assembly. **Ultra-high pressure waterjet** and **high-speed routing/drilling** in-one system provides **increase productivity** and **flexibility** while enhancing part quality. Waterjets are a **superior method for cutting** virtually any composite material with a **high level of accuracy**, no dust or toxic fumes, **faster** than most traditional machining methods, and fixturing requirements are dramatically simplified. With both solutions, **work flexibility is improved** and **capital investment is reduced**. Contact Flow to learn how our waterjet systems will **improve your bottom line**.
